

Arkansas Tech University

Russellville, Arkansas

“Working with a precast concrete manufacturer early in the process was very helpful with the budget and design during the early stages of the project. Precast was the faster and more economical construction method to achieve the functional use and aesthetic appearance we desired.”

The Arkansas Tech University baseball stadium seating addition was a much needed upgrade to their aging ball park. The precast risers allowed for the addition of 261 seats. The stadium addition also contains a concession and lounge area with additional seating capacity of 28. There are also restroom facilities incorporated into the structure. The cantilever crane-inspired canopy provides shade and shelter for the fans and supports three large amplifiers for the new upgraded sound system.
