

The Collective at Playa Vista

The Collective at Playa Vista comprises a 204,422 square foot, five-building office campus located in the blossoming Playa Vista submarket of West Los Angeles.

Designed by the local Shimoda Design Group each building features two floors with dramatic double height spaces of up to 21 feet. The **architectural precast concrete wall panels** and wood exterior melds with interiors of steel columns, wood flooring and exposed roof framing to create an inviting yet industrial feel, complementing the landscaped ground and private garden patios.

Coreslab Structures L.A. worked closely with the Shimoda Design Group allowing them oversight to make sure their vision was achieved. Custom textured form liners were used to help produce the look and feel that was desired.

Project Description:

Textured Precast
Wall Panels
Over 39,000sqft
156 Pieces
