

Garland County Detention Center

Hot Springs, Arkansas

“The precast concrete worked great for our project. It was high quality and excellent in appearance which is what we promised the voters of Garland County. In hindsight I wished we had used more precast for the interior wall panels. That would have given us more control over keeping the project on schedule.”

Rick Davis
Garland County Judge

“The greatest advantage of using Precast Concrete for the detention center was the speed of construction.”

Matt Schichtl
Project Superintendent
Nabholz Construction

“For a jail or prison, durability is very important. For Garland County, the Owner, appearance was also important. The painted precast concrete with exposed aggregate and reveals was the best building product available to satisfy both durability and aesthetic requirements for the exterior of this project.”
