

USF PARKING GARAGE III

Tampa, Florida

Architect: Burk, Hogue, & Mills Architects

Engineer: Walker Parking Consultants

General Contractor: Perry McCall Construction

- Many of the advantages of choosing precast components create economic value. Low-cost aesthetic design, fast speed to market, light, bright interiors, durability and long life-cycle are just a few of the ways precast benefited this project's bottom line.
- High performance concrete is inherent within a precast structural system. Its *durability* provides safeguards against corrosion and enhances service life. These techniques result in 3,000- to 5,000-psi overnight design strengths, translating routinely into 7,000 to 9,000 psi in field applications.
